

# XML in the air – Changing subtitle workflows with TTML

Balisage 2016

Andreas Tai, IRT

Copyright, 1878, by MUYBRIDGE.

MORSE'S Gallery, 417 Montgomery St., San Francisco.

## THE HORSE IN MOTION.

Illustrated by  
MUYBRIDGE.

AUTOMATIC ELECTRO-PHOTOGRAPH.

"SALLIE GARDNER," owned by LELAND STANFORD; running at a 1.40 gait over the Palo Alto track, 19th June, 1878.

The negatives of these photographs were made at intervals of twenty-seven inches of distance, and about the twenty-fifth part of a second of time; they illustrate consecutive positions assumed in each twenty-seven inches of progress during a single stride of the mare. The vertical lines were twenty-seven inches apart; the horizontal lines represent elevations of four inches each. The exposure of each negative was less than the two-thousandth part of a second.

Black thunder is winning

## Subtitles are images and text...

- Picture Frame 1 has text "Black thunder [...]"
- Picture Frame 2 has text "Black thunder [...]"
- Picture Frame 3 has text "Black thunder [...]"
- Picture Frame 4 has text "Black thunder [...]"
- ...

...and could be Images and XML

```
<subtitle color="yellow" start="1f" end="12f">  
    Black thunder is winning  
</subtitle>
```

# TTML = W3C Timed Text Markup Language

```
<p begin="1s" end="2s">  
  <span color="yellow" ... >  
    Nein, und wir waren eine  
  </span>  
  <br />  
  <span>  
    von den ersten am Kreuzeck unten.  
  </span>  
</p>
```

## Use of TTML for broadcast

HBB  all uses EBU-TT = TTML

## Production

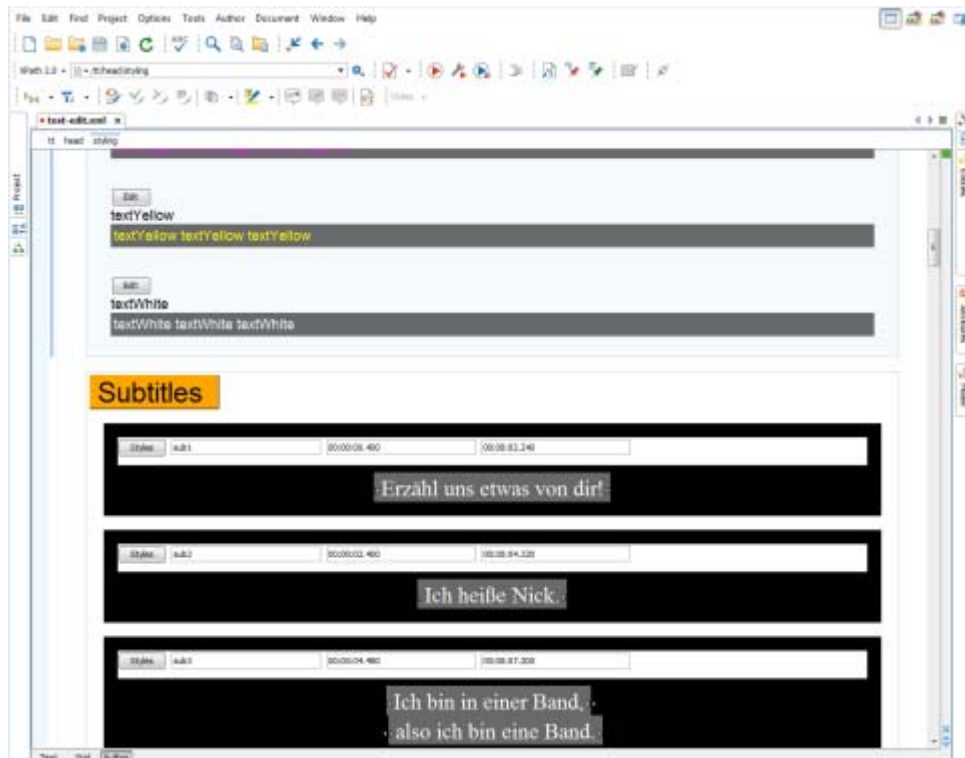

# Current subtitle preparation systems

- Intuitive for Speed
- Sync with Video
- Speech to Text

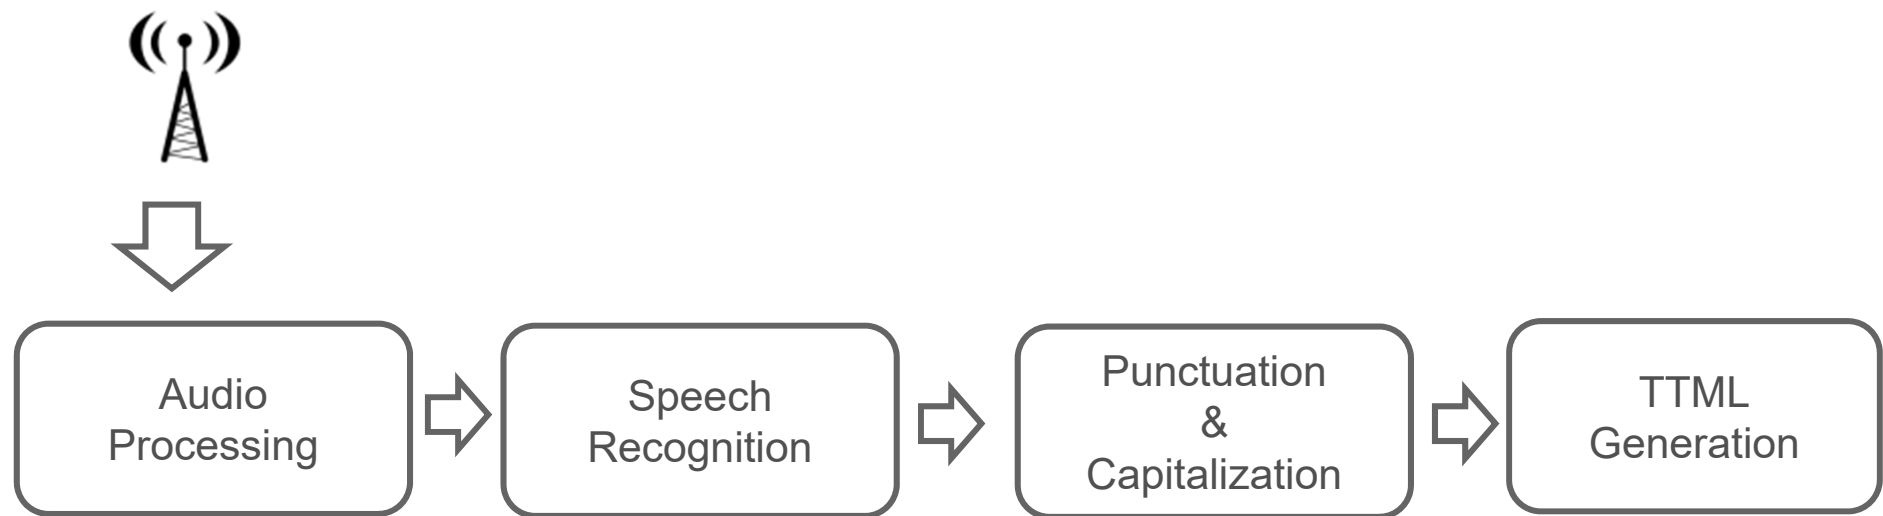

# Native TTML editing

- Customization
- Validity
- Cost

# Automatic production of subtitles

## RATING - TTML and **PRODUCTION**

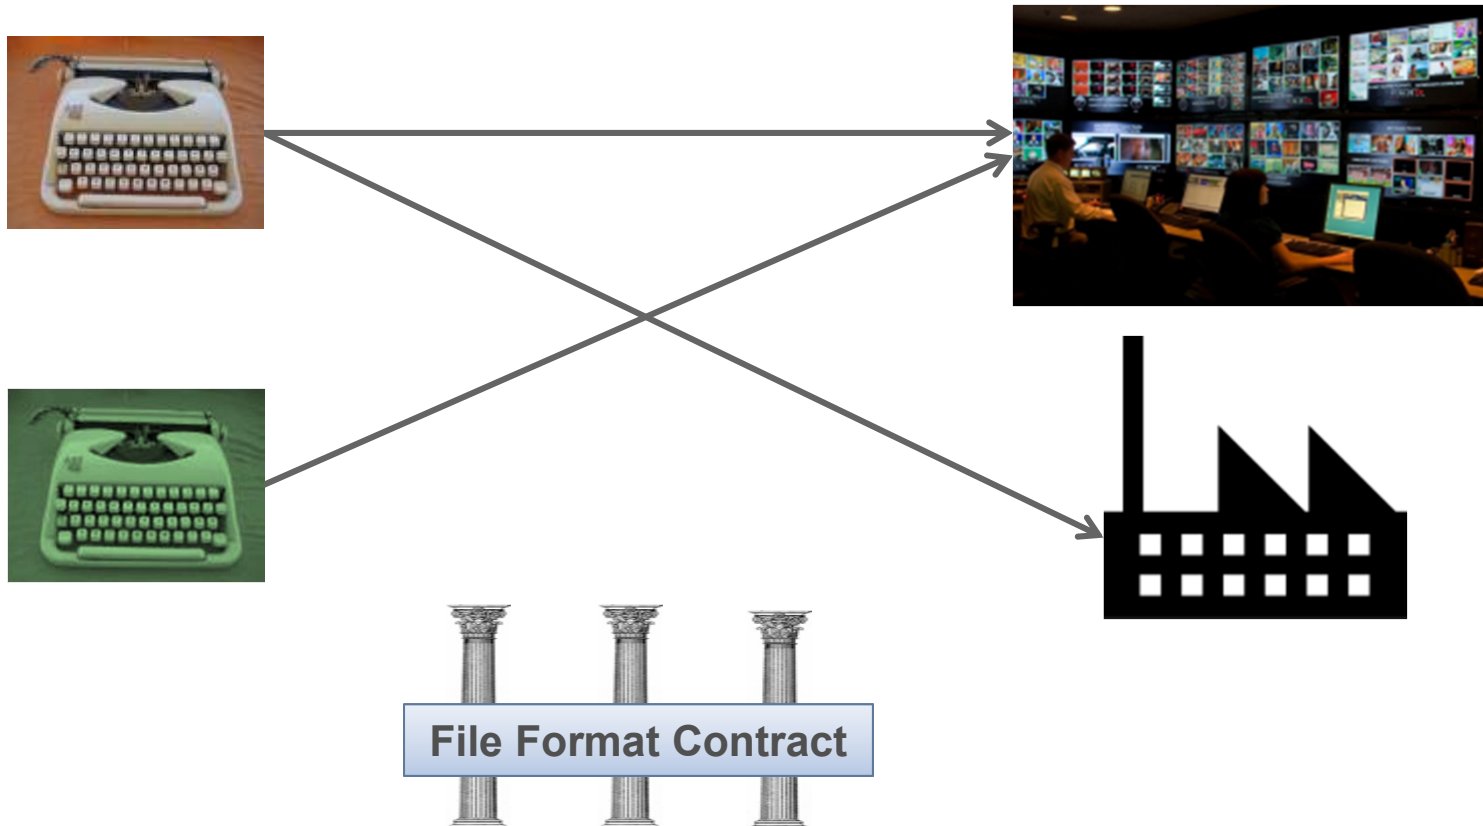

- XML Stack 
- Conformance 
- Wish TTML as view data model !
- Perspective: open, but promising..

**Production**

**Contribution  
(Archive,Exchange)**

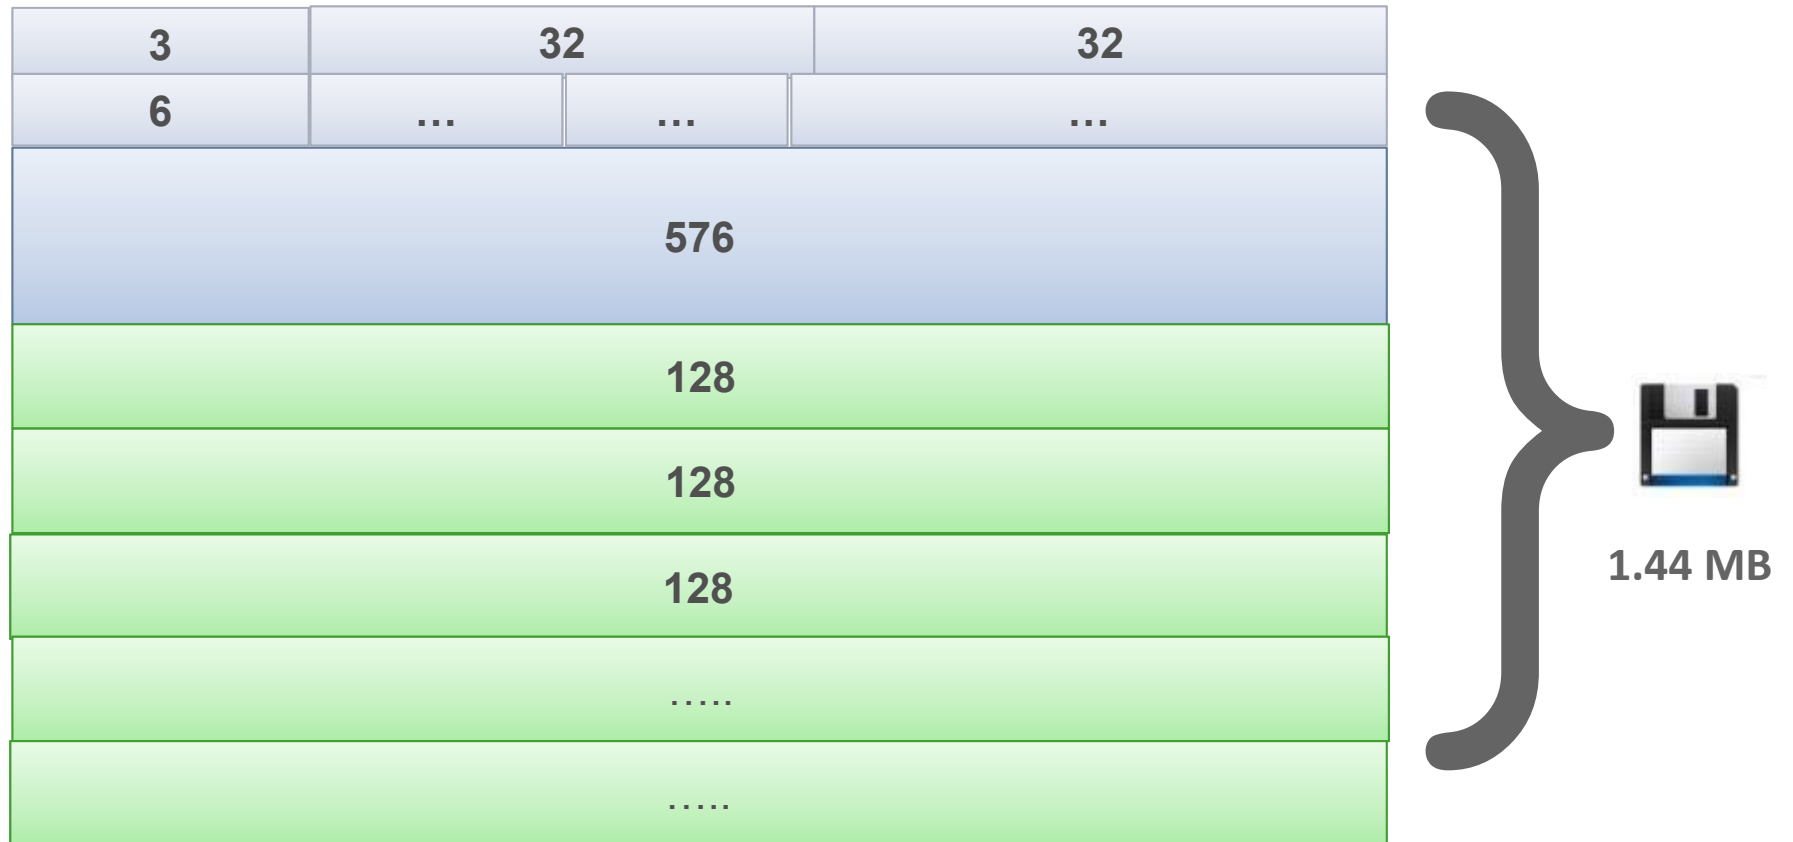

# Subtitle Contribution

# Subtitle Exchange format EBU STL (Binary)

|           |         |     |               |               |
|-----------|---------|-----|---------------|---------------|
| Codepage  | Title   |     | Editor        | Metadata      |
| Date      | ...     | ... | ...           |               |
| Extension |         |     |               |               |
| TimeIn    | TimeOut | ... | Subtitle Text | Subtitle Data |
| TimeIn    | TimeOut | ... | Subtitle Text |               |
| TimeIn    | TimeOut | ... | Subtitle Text |               |
| .....     |         |     |               |               |
| .....     |         |     |               |               |

## EBU STL – "Byte Layout"

## EBU-STL ist popular

interoperability

lack of extensibility!!

## Users are creative...

...TTML gives creativity some structure....

```
<head  >  
<metadata>  
  <title>...</title>  
  <foo:bar1>...</foo:bar1>  
  <foo:bar2>...</foo:bar2>  
  ...  
</metadata>  
</head>
```

..but...

...too many choices can kill creativity.

## TTML variations – TTML timing

```
<p begin="1s" end="3s">  
    Black Thunder wins!  
</p>
```

```
<p begin="1s" dur="2s">  
    Black Thunder wins!  
</p>
```

## Variation to express timing

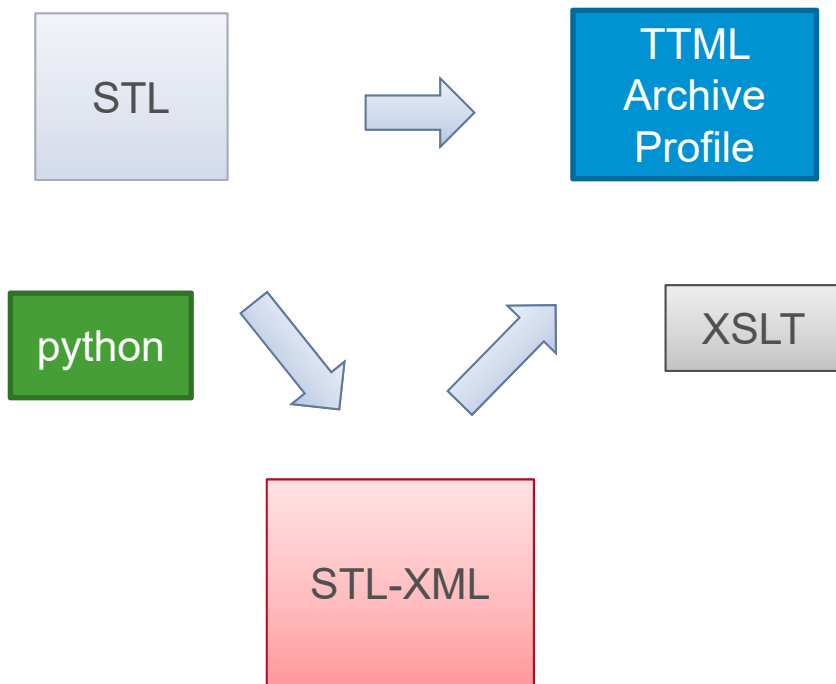

```
<div begin="0s">  
  < p begin="2s">  
    <span begin="1s" end="3s">  
      <span begin="0s">Black </span>  
      <span begin="2s"> Thunder </span>  
    </span>  
    <span begin=„5s“>wins!</span>  
  </p>  
</div>
```

...implement and test all possibilities.

# UTMS – Subtitle Management - BaseX & BaseX

The screenshot displays a web interface for subtitle management. At the top, there is a green button labeled '+ Asset anlegen'. Below this, the interface is divided into two main sections: 'Metadaten' (Metadata) on the left and 'Dateiauswahl' (File Selection) on the right. The 'Metadaten' section contains six input fields, each with a label in a grey box: 'Titel', 'Episode', 'Red. Anm.', 'Techn. Anm.', 'Planungs-ID', and 'Video-ID'. The 'Dateiauswahl' section features a dashed rectangular box containing the text 'Datei auswählen' and '... oder per Drag and Drop einfügen.'.

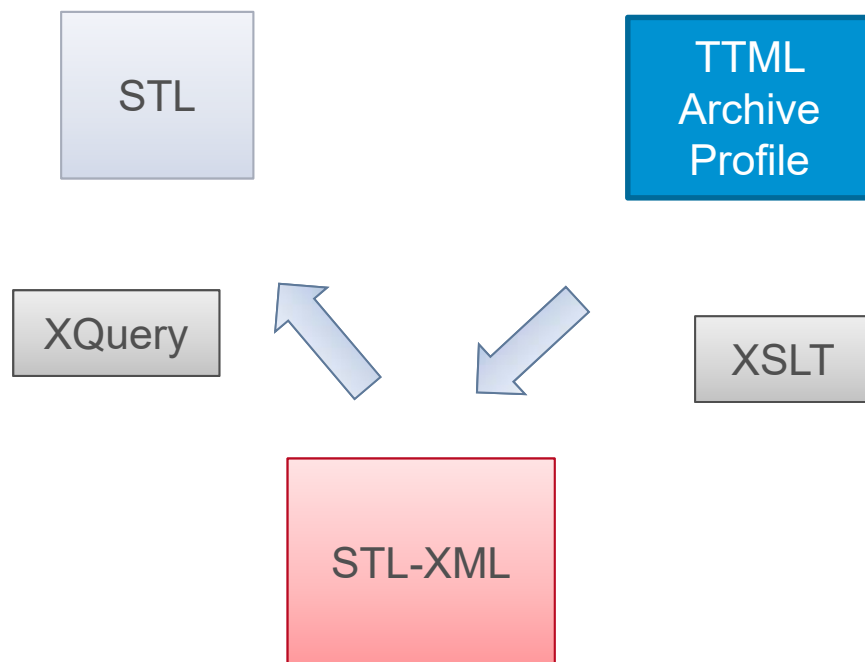

# Use of the XML Stack

## SCF

- **XSLT 1** for Transformation
- **Schematron** for Unit-Testing
- **XPROC** for transformation pipe lines and to trigger unit tests
- **Dita** for documentation

## UTMS (BaseX)

- **XQuery, RestXQ**
