

# **Retractions and Corrections at Scholars Portal Journals**

Jessica Hymers  
Qinqin Lin

# Land Acknowledgement

*"I (we) wish to acknowledge this land on which the University of Toronto operates. For thousands of years it has been the traditional land of the Huron-Wendat, the Seneca, and the Mississaugas of the Credit. Today, this meeting place is still the home to many Indigenous people from across Turtle Island and we are grateful to have the opportunity to work on this land."*

# Agenda

# Scholars Portal Journals

## OCUL

Founded in 2002 SP provides the shared technology infrastructure for OCUL

Certified TDR in 2013 ensuring long term preservation

## TDR Preservation

Scholars Portal  
Journals XML  
database

## Continuous Loading

Average of 12,000 journal articles loaded each day.

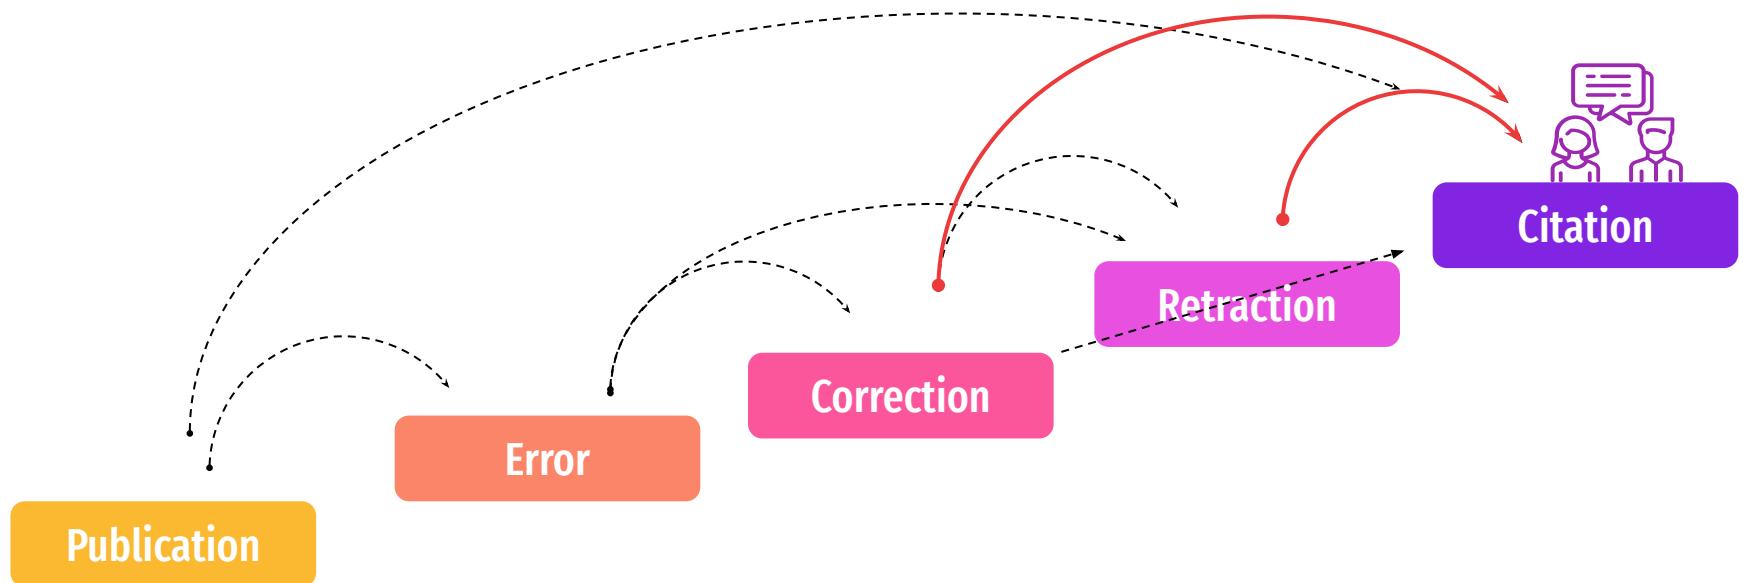

Provides access to OCUL licensed content to over 500,000 users across Ontario

## Access Across Ontario

# Standards and Communities of Practice

Committee On  
Publication Ethics

NISO - Communication  
of Retractions,  
Removals and  
Expressions of Concern

Scholars Portal

Reducing the  
Inadvertent Spread of  
Retracted Science

# History of SP Handling Retractions

SP receives and loads XML data from publishers - usually in JATS format

Occasionally publishers send lists of retracted articles which are then manually deleted or replaced with new descriptive or full text metadata

Periodic manual database cleanup - identifying retractions by string search

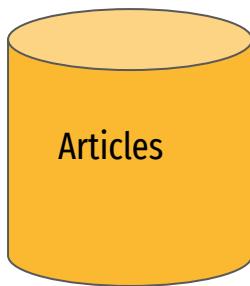

Retractions not sent in a publisher list, not labelled explicitly as a retraction, and all corrections are missed in this process

SP needs a system for handling retractions that is as automatic and as clear as possible.

# New Approach

```
<related-article related-article-type=“retracted-article”  
ext-link-type=“doi”  
xlink:href=“10.4103/0010-5412.120860” />
```

# Coding

read/update

Standalone Java program

get articles contain element <related-article>

For article A, if it's <related-artilce> has DOI attribute, then look for article B based on this DOI in database

Insert article A's DOI into B as element  
<related-article>'s attribute.  
<related-article xlink:href= 'doi of A'>

```
StringBuilder query = new StringBuilder();
query.append(XQUERY_VERSION);
query.append(" let $doc := doc("");
query.append(uri);
query.append("") return $doc//related-article/@related-article-type");
return execut(query.toString());
```

## JAVA

```
public static String getRelatedArticleType(String publisher, String relatedArticleType) {
    query.append(" let $type := ' ");
    query.append(relatedArticleType);
    query.append(" let $dataset-type :=
doc(\"/LOGS/RelatedArticleTypeMapping.xml\")//dataset-type[@name eq $publisher] ");
    query.append(" return if($dataset-type) then (");
    query.append("let $matching_article_type := $dataset-type//related-article[@type eq
$publisher]/matching-article-type/text() ");
    query.append("return if($matching_article_type) then $matching_article_type ");
    query.append("else concat(\" Warning: Found new related-article type: \", $type, \" for publisher
\", $publisher) ");
    query.append(" else concat(\"Warning: Found new publisher \", $publisher, \" for related-article
type: \", $type) ");
}
```

## INTERFACE

```
let $retractions := $article//related-article
let $refs := $retraction/(@xlink:href | @xlink.href)
let $note_uri := u:getURIbydoi($href)
let $related-article-type := $href/../@related-article-type or "default"
let $type := u:getRelatedArticleTypeDisplayText($publisher, $related-article-type, $language)
return
<div>
  <i class="fa fa-exclamation-triangle" aria-hidden="true"></i>
  {$type}
  <a href="https://resolver.scholarsportal.info/resolve{$note_uri}">{$note_uri}</a>
</div>
<script src="{$c:base}/js/local.js" type='text/javascript'></script>
```

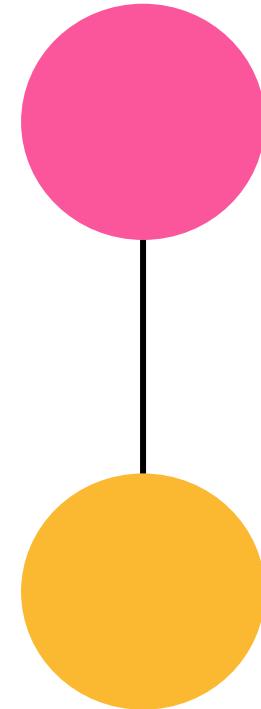

# Case 1

**Retracted article with watermarked PDF:**

```
<related-article related-article-type="retraction-forward"  
ext-link-type="doi" xlink:href=  
"10.4103/0019-5413.189615"/>
```

**Retraction Notice**

```
<related-article related-article-type="retracted-article"  
ext-link-type="doi" xlink:href= "10.4103/0019-5413.139860"/>
```

## RETRACTED ARTICLE: Hip spica versus Rush pins for management of femoral diaphyseal fractures in children

# Results

## XML Mapping File

Loaded to the database and referenced by java program and web interface

## Java Program

A program to insert <related-article> elements into XML records that is run every three months

## SP Website

Alterations to the code of the SP website to display the link and descriptive text based on the mapping file

## Future Plans

Many plans for the future...

# Next Steps/Future Opportunities

## Search Filters

Adjust the search interface to allow for the inclusion or exclusion of retracted/corrected articles.

## Expansion

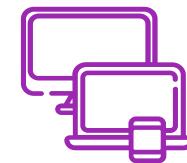

Expand the XML mapping file to include other types of article relationships such as peer review.

## Non DOI PIDs

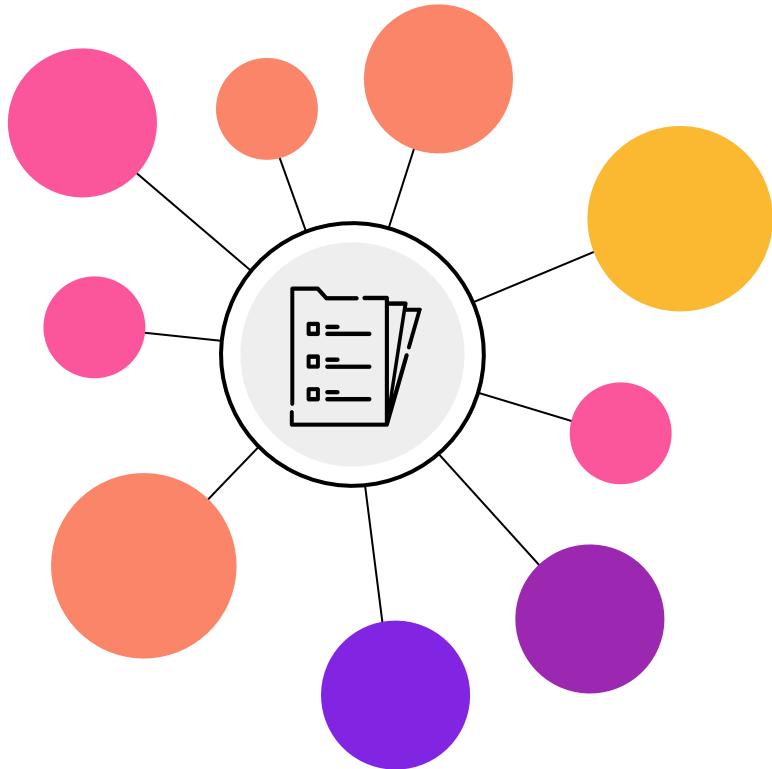

Expand the Java program to be able to recognize and utilize publisher specific PIDs for cases that do not include DOI

## Web Interface

Improved clarity in web interface could involve new design for links and addition of definitions.
